2012 PAID INTERNSHIP
ENERGY INDUSTRY ANALYST

The intern will monitor and learn about market structure, conduct, policies and performance. Energy markets are dynamic and complex, requiring interns to be familiar with policy and regulatory issues, financial products, and market rules in order to effectively detect anti-competitive and manipulative behavior.

To carry out these duties the individual must have a basic knowledge of energy markets, strong interest in working on energy market related issues, and an aptitude for quantitative and statistical analyses. Specific requirements include prior experience in using SAS or other statistical software. Database management experience also is highly desirable.

The candidate must be a U.S. citizen. Intern candidates must also be enrolled in classes for the semester following their internship.

Please forward your resume to work@ferc.gov with “DAS/DEMO Summer Intern” in the subject line.
