The Federal Energy Regulatory Commission's Office of Enforcement is seeking to hire Energy Industry Analyst interns to work this summer within the Division of Analytics and Surveillance (“DAS”) in Washington, D.C. DAS is responsible for the surveillance of Commission jurisdictional energy markets as well as the technical analytics in support of investigations and other Commission endeavors.

The intern will analyze and manage large volumes of data related to energy trading using SAS, and therefore must have significant experience programming in SAS or similar statistical software. Much of the internship will be spent researching the intricacies of physical energy trading, related financial products, and the nexus between them. At the end of the summer, interns will be expected to present their work to the Division.
